FEATURES

Electronic Q-damping (Dynamic Servo Tracer)

Low frequency resonance, dependent upon cartridge compliance and the effective mass of the tonearm, is electronically damped both horizontally and vertically to eliminate crosstalk and inter-modulation distortion. This optimizes the performance of the DP-57L's/DP62L's/DP-67L's/DP-72L's arm and results in record reproduction with outstanding stereo imaging characteristics and a minimum of noise or vibration.

Low-mass straight arm tube with lamination damped headshell

Dual construction of the arm tube greatly reduces headshell resonance. This, together with the lowmass straight arm tube improves tracing ability and further contributes to the DP-57L's/DP-62L's/DP-67L's/DP-72L's clarity and stable stereo imaging.

Thick precision turntable platter exhibits superb acoustic characteristics.

The use of a thick turntable platter to minimize vibrations transmitted from external sources is essential for clear sound reproduction.

Excellent rotational characteristics

The DP-57L's/DP-62L's/DP-67L's/DP-72L's high performance AC servo motor; magnetic record head speed detection system; quartz lock, bi-directional servo result in phenomenal performance specifications: 0.008% wrms (rotation system) wow and flutter; 82dB (DIN-B) S/N ratio and rotational accuracy of 0.002%.

Auto-lift mechanism with non-contact end-of-record detection system

When the record is finished, the stylus automatically lifts off the record and the turntable stops rotation. This avoids unnecessary wear of the stylus tip.

Beautifully finished wood cabinet

DENON's tradition of products superbly crafted from the finest materials is continued with the DP-57L's/ DP-62L's/DP-67L/DP-72L.

Interchangeable straight and S-type arm tubes via standard 4P connectors.

Optimum cartridge matching can be achieved quickly and easily through interchangeable tonearm tubes.

MAIN SPECIFICATIONS

Turntable motor

Drive method: Servo controlled direct drive

Speeds: 33-1/3rpm, 45rpm

Wow and flutter: less than 0.008% wrms (servo system)

less than 0.02% wrms (JIS)

S/N ratio: more than 82dB (DIN-B)

Rise time: Nominal speed within 1.5 seconds (at 33-1/3rpm) (DP-57L's/

DP-62L's)

Nominal speed within 1.3 seconds (at 33-1/3rpm) (DP-67L's/

DP-72L's)

Turntable platter: Aluminum die-cast, 300mm diameter

Moment of inertia 280kg · cm²

(incl. turntable sheet)

Motor type: AC servo motor

Speed control method: Speed servo via frequency detection and phase servo control

Load characteristics: 0% (stylus force 150g, outermost groove) (DP-57L's/DP-62L's)

0% (stylus force 200g, outermost groove) (DP-67L's/DP-72L's)

Brake method: Electronic brake
Speed deviation: less than 0.002%

Tonearm

Type: Static balance type tonearm with electronic damping mecha-

nism (interchangeable tube section)

Effective length: 244mm
Overhang: 14mm

Tracking error: within 2.5° Stylus force range: 0 - 3q

(1g per 1 rotation, 1 scale = 0.1g)

Suitable cartridge weight range: approx. 4 - 15g (using the straight type arm tube, incl.

screws, nuts)

approx. 11 - 20g (using the S-type arm tube, incl. headshell,

screws, nuts)

Head connector: Standard 4P connector (S-type arm tube)

Arm height adjustment range: approx. 5mm (DP-57L's/DP-62L's)

approx. 6mm (DP-67L's/DP-72L's)

Output cable: Low capacitance type

Arm lifter: Servo control via the angular control motor (Cueing device)

General

Power supply: 50Hz/60Hz compatible. The rated voltage is indicated on the

rating label at the rear of cabinet.

Power consumption: 15W

Dimensions: 485 x 185 x 410mm (W x H x D) (DP-57L's/DP-62L's)

19.1 x 7.3 x 16.1 in

485 x 195 x 410mm (W x H x D) (DP-67L's/DP-72L's)

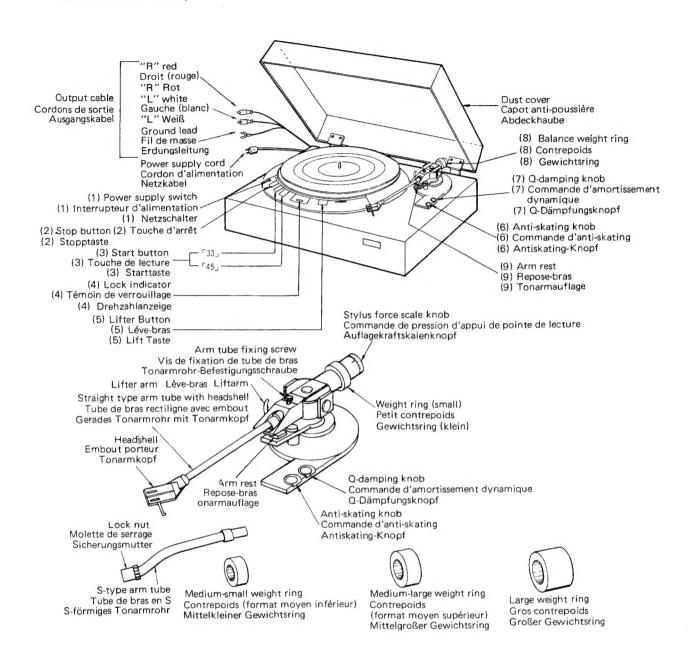

19.1 x 7.7 x 16.1 in (dust cover closed)

Weight: 11.5 kg 25.4 lb (DP-57L's/DP-62L's)

15 kg 33 lb (DP-67L's/DP-72L's)

^{*} For product improvement purposes, the above specifications are subject to change without notice.

(DP-67L's/DP-72L's)

1. Power switch

When the switch is pressed (ON -), the power is turned ON and the stop button will light. When the switch is pressed again (OFF -), the power is turned OFF and the lamp is turned OFF. If the power switch is turned ON (-) while the arm lifter is lowered, the tonearm will rise.

2. Stop button

When this button is pressed, the lifter button lamp is turned OFF. The arm lifter rises and after a short pause, the "33" or "45" button lamp is turned OFF, the stop button lamp will light and the turntable will then stop.

3. Start button 33 START 45

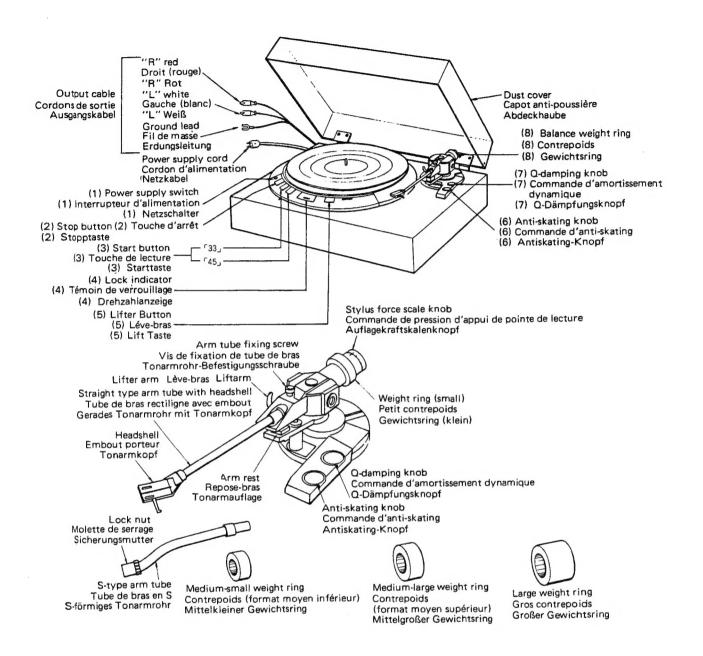

Press "33" for 33-1/3 rpm records, "45" for 45 rpm records

When the start button is pressed, the button lamp will light and the turntable will start to rotate.

The lifter button will light and the arm lifter is lovered.

4. Lock indicator

The lock indicator will light when the turntable speed reaches the specified phase-lock state. It flickers when the turntable speed is in transition, such as when stopping, starting or changing speeds. It remains off during stop.

5. Lifter up/down (cueing) button

Each time the button is pressed, the arm lifter moves up/down. The lamp will light when the lifter is down.

6. Anti-skating knob

When a record is being played, a force which pulls the stylus towards the center of the turntable is generated. This force is compensated for by adjusting the Anti-skating knob.

7. Q damping knob

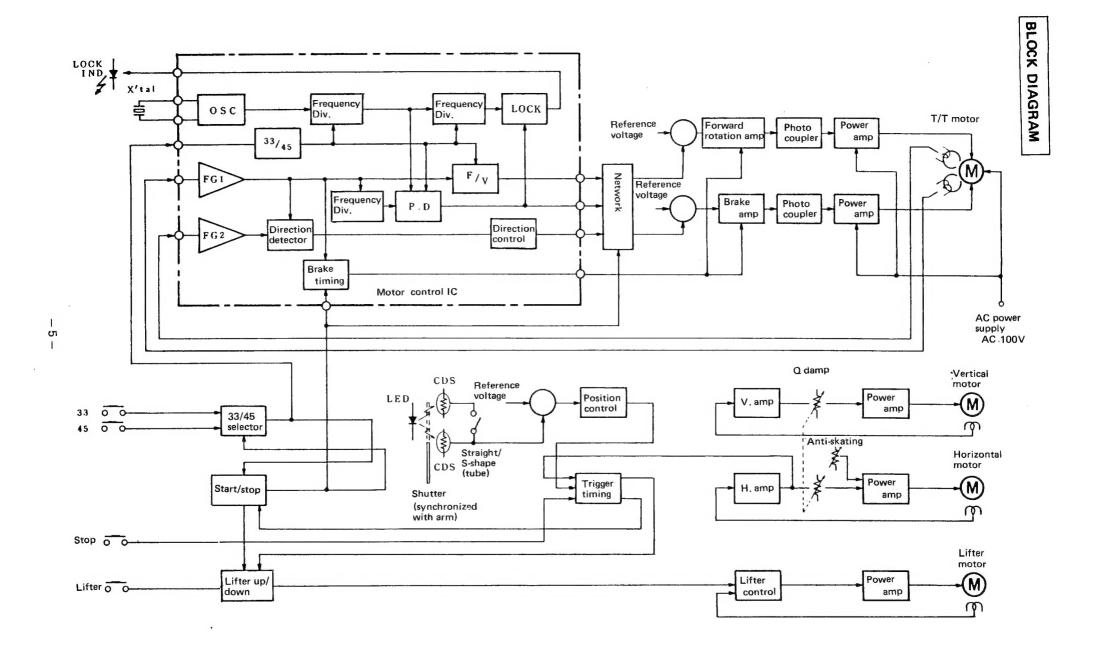

The recommended amount of Q damping can be achieved by setting the Q damping knob to the same value as the stylus force.

8. Weight ring

Use this ring to obtain zero balance of the tonearm.

9. Arm rest

By holding the finger grip of the headshell and moting it to the left, the tonearm lock is disengaged. When locking the tonearm, push it in the opposite direction.

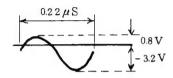

EXPLANATION OF THE MICROPROCESSOR

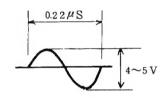

Motor Control IC . . . IR3T02 (at standard revolution of 33 rpm)

The numbers on the left hand side indicates the terminal number.

2. 4.5MHz OSC

3. 4.5MHz OSC

4. rpm selector

H: 45 rpm L: 33 rpm

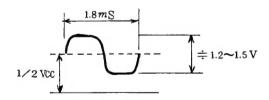

5. power source input

Vcc: 5V ±0.5V

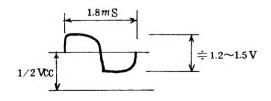

6. FG I bypass terminal

E6 ≒ ½Vcc

7. FG I lowpass terminal

8. FG I output

9. FG I inverse input

The gain set element is connected. E9 ≒ ½Vcc

10. FG I non-inverse input

10mVpp ~ 100mVpp E10 ≒ ½Vcc

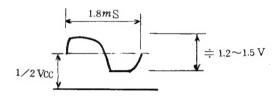

11. FG II non-inverse input

 $10 \text{mVpp} \sim 100 \text{mVpp}$ E11 = $\frac{1}{2} \text{Vcc}$

12. FG II inverse input

The gain set element is connected. E12 ≒½Vcc

13. FG II output

14. ground terminal

15. F/V output

slower than normal revolution: $1.8 \sim 4.5 \text{V}$

normal revolution: ⇒ 1.8V

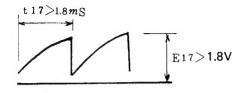

faster than normal revolution: 0 ~ 1.8V

16. F/V hold terminal

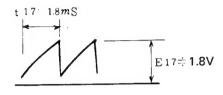

same as terminal 15

17. F/V triangular wave

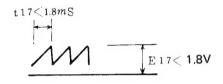

slower than normal revolution

normal revolution

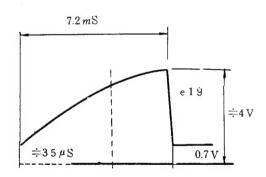

faster than normal revolution

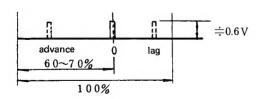

18. timing pulse width-set terminal

E18 ≒ 0.6V

19. PD triangular wave

20. sample pulse monitor terminal

21. PD hold terminal

slow phase: 1.8 ~ 4V normal phase: ≒ 1.8V advanced phase: 1 ~ 1.8V

22. PD output

same as terminal 21

23. Lock detector time set terminal

during lock: 0.6V lock disengaged: 0V

24. Direction detector output

normal revolution: 0V reverse revolution: ≒ 4V

25. Revolution detector

stop: 0V

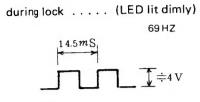

26. START/STOP terminal

H → START L → STOP

27. Stop output

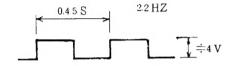

during stop control: 0V during start: open

28. Lock indicator

stop (LED lit)

during transition . . (LED flashes)

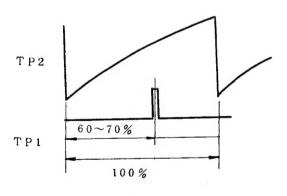

ADJUSTMENT METHOD

PHONO MOTOR ADJUSTMENT

1. Speed Adjustment

- Connect TP1 and TP2 to CH1 and CH2 terminals and connect TP4 to the ground terminal when using the dual trace oscilloscope.
- Set the turntable speed to 45 position. Adjust the TP1 pulse to stop at a position of between 60% and 70% of the TP2 triangle wave cycle with VR2. (Refer to Fig. 1)
- Set the turntable to 33 position. Adjust in the same way as above with VR1.

(Fig. 1)

TONEARM CONTROL ADJUSTMENT

1. Horizontal Amp Off-set Voltage Adjustment

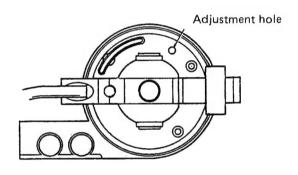

- Fix the tonearm to the arm rest. Connect the high input resistance DC voltmeter (tester) between TP3 and TP4.
- 2) Adjust the voltage to $0 \pm 0.01V$ with VR3.

2. Lifter Amp Off-set Voltage Adjustment

- Connect the DC voltmeter (tester) to TP303 and TP304 while short circuiting the test points TP302 and TP304.
- 2) Adjust the voltage to $0 \pm 0.1 \text{V}$ with VR301.

3. End Detecting Position Adjustment

- Fix the stylus point at a position 60 mm from the center spindle by using the straight arm.
- Connect the DC voltmeter (tester) to the test points TP301 and TP304.
- Adjust the voltage to 1.55 ± 0.05V by adjusting the cam with a flat headed screwdriver. The cam adjustment hole is located at the back of the arm base. (Refer to Fig. 2)

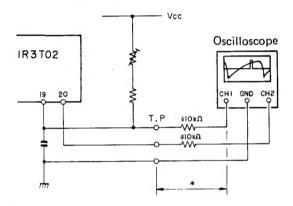

(Fig. 2)

NOTE:

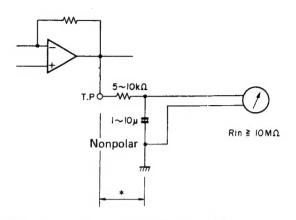

- Be sure not to interfere with the function of any parts when connecting the measuring instrument for adjusting. Check that there is no loading resistance or loading capacity problem. Refer to the following example for the exact measuring technique.
- While adjusting or measuring the detecting positions, close the bottomplate or cover the unit with a black cloth or paper so that no light enters. Also when adjusting the speed detector, be sure no magnetic sources are near and that there are no vibrations.

* Speed Adjustment

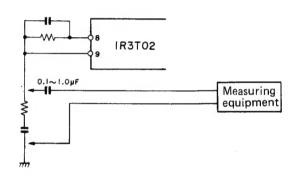

* Keep the wire as short as possible. If it is long, connect the resistors in series.

* Off-set Voltage Measurement

* This distance should be as short as possible.

* FG Signal Check or Wow/Flutter Measurement

WARNING:

1. Component parts

Parts marked with \triangle and/or shading in this service manual have special characteristics important to safety. Be sure to use the specified parts for replacement.

2. Leakage current

Before returning the appliance to customer, test the leakage current when the power plug is connected. Use a calibrated (with an error of not more than 5%) leakage current tester and measure the leakage current from any exposed metal to the earth ground. Reverse the power plug polarity and test the above again.

Any current measured MUST NOT EXCEED 0.5 miliamps. Corrective measure must be taken if it exceeds the limit.
